Evan Villeneuve

Oakville, ON | (905) 617-5115 | evilleneuve23@gmail.com | LinkedIn

SUMMARY

Software Engineer and recent Computer Science graduate with hands-on experience building and optimizing fullstack systems. Skilled in designing scalable architectures, ensuring data integrity, and improving system performance and reliability.

EDUCATION

University of Toronto **Sep 2020 - Apr 2025**

Honour's Bachelor of Science, Computer Science

- Mathematics Minor

WORK EXPERIENCE

Aversan | May 2023 - Sep 2023 - *Software Engineering Intern*

- Created a Python program to automatically extract and insert test data from both Excel spreadsheets and test stations into a PostgreSQL database for efficient analysis.
  - Designed the program and system to optimize for concurrent operations, ensuring data integrity and consistency through advanced locking mechanisms and transaction management, improving throughput by 38% compared to the previous system.
- Developed a Python application to parse .pdf and .docx files for comments, improving company response time by up to 50% for external inquiries and internal reviews.
- Developed and tested embedded C firmware for CAN Bus communication protocols, incorporating Python unit testing to validate reliability and performance while collaborating with cross-functional teams to ensure quality and performance.

DataAnnotation | Apr 2025 - Present - *Freelance Software Data Analyst / Data Annotator*

- Engineered both challenging prompts and expansive repositories in multiple languages including Python, C, and Java for AI coding agents to develop further while meticulously reviewing and correcting their outputs.
- Designed RESTful APIs using Flask, FastAPI, and Django for request and response handling and integrated middleware for dependable communication between frontend clients and backend services.

PERSONAL PROJECTS

Python Proxy Server

- Built single-threaded proxy server designed to simultaneously handle multiple concurrent local connections in an event-driven design for http pages.
- Implements local caching with user-configurable TTL, reducing redundant upstream requests and lowering average response latency by upwards of 60%.
- Gained experience in network programming and HTTP protocols, deepening understanding of client-server architecture and data flow management.

Mockup Social Media Website

- Gained valuable collaborative experience through working to develop a full-stack application with two other developers following an Agile methodology.
- Personally responsible for the design and implementation of a backend RESTful user account API using Django and SQLite; supported CRUD operations for profiles and account settings.
- Implemented token-based authentication and input validation to secure endpoints and prevent invalid updates.
- Integrated API with React frontend to enable responsive profile management and seamless data flow.

C Shell

- Developed a custom command-line shell using C, implementing built-in commands from the ground up.
- Implemented piping functionality to enable data flow between processes, increasing command execution efficiency by 46%.
- Manually managed resource allocation and memory clean-up throughout the project, to both maintain optimal performance and prevent memory leaks.

SKILLS

- **Programming Languages**: Python, C, C#, Java, JavaScript
- **Web, APIs, & Databases**: HTTP, REST, SQL, Redis, Postgres, AWS
- **Machine Learning & AI**: GenAI, PyTorch, Tensorflow, Prompt Engineering, Neural Networks
